## Edge Profiles

The profiles pictured are common profiles. Vinci Stone Products is not limited to these profiles and combinations. Bevel sizes range from 1/4" x 1/4" to the thickness of the material. Radius sizes range from 1/4" to a demi bullnose. Laminated profiles can be any combination of individual profiles.

## THINGS TO REMEMBER

- Someone of authority **must** be at the job site at time of field measure to review the templates.
- All cabinets are to be installed in their final resting-place. **We will not template if cabinets are missing or unsecured.**
- All items relating to the countertops are to be on site at the time of field measure. This includes sinks, faucets, cooktops, soap dispensers, instant hots, etc... Not having all items at time of field measure **will** result in a delay in fabrication.
- Old countertops are to be removed prior to field measure so that we can verify the structural integrity of the cabinets and insure accurate measurements. **We will not template over old countertops.**
- **Fabrication delays and additional trip charges** can be avoided if the above items are addressed **prior** to the time of field measure.
- We recommend that you contact your dishwasher manufacturer or dealer for side-mount or floor-mount brackets. **Attaching a dishwasher directly a stone countertop may result in fracture or discoloration of the stone.**
- For large or heavy undermount sinks, it is necessary to support the sink in the cabinet. Please follow any directions given by the sink manufacturer. If these directions cannot be followed, the diagram below illustrates how we recommend mounting these sinks. **This should be done prior to the time of field measure.**
